### **NORTHWEST RENEWABLE, LLC EMERGES AS RENEWABLE ENERGY CONCERN. Intends to Build 25 MW Longview, Washington Biomass Electricity Generation Facility**

VANCOUVER, WASHINGTON, USA – Northwest Renewable, LLC (“NWR”) has announced that it intends to build a 25 MW Biomass Electricity Generation Facility (“Facility”) at the Mint Farm Industrial Park in Longview, Washington. The Facility will burn forest slash and other wood waste in a boiler to create steam to generate electricity through a steam turbine for use by consumers who prefer power generated from renewable sources. NWR has engaged Makad Corp. (“Makad”) of Vancouver, Washington to act as the Developer for the Facility. Makad Construction Corp. will act as the general contractor pursuant to terms of a guaranteed lump sum EPC Contract with NWR. NWR intends to directly hire a fuel supply expert to arrange or aggregate wood fuel supplies for the Facility. The expert has been identified by NWR and intends to sign an employment agreement with NWR.

“The emergence of Northwest Renewable, LLC as a significant player in the renewable energy generation industry is a further step in Makad Corp.’s overall strategy of increasing its leadership in the energy technologies of the future,” said Elie Makad, Chief Executive Officer of Makad and NWR. “We have assembled an experienced team of development, construction, engineering, power and fuel supply experts in their respective fields to make this new Facility become a reality in the Pacific Northwest,” Mr. Makad added.

#### **About NWR:**

NWR was formed in 2006 to own a facilities site in Longview, Washington. NWR has previously announced that it intends to build and own renewable energy industrial projects, including the Facility.

#### **About Makad Corp.:**

Makad Corp. is a privately owned international project development company. It is a member of the Makad Global Team which is a group of affiliated companies generally engaged in development, engineering, construction and operation of energy generation and alternative energy projects (including alternative fuels, biomass, wind and solar power generation), petro-chemical projects, hospitality and general industrial construction.
